

Brooks Automation Features PreciseFlex™ Collaborative Robots, the Fastest, Safest on the Market, at Automatica in Booth B4.504

CHELMSFORD, MA – Brooks Automation will exhibit at [Automatica](#), the world’s leading trade fair for smart automation and robotics, at Messe Munich. The exhibition will feature nearly 900 exhibitors and 45,000 attendees from around the globe.

A longtime collaborative robot brand of choice in the laboratory automation space, Brooks Automation is now expanding to other industrial manufacturing markets, as its PreciseFlex™ robot models are ideal for small parts assembly, machine tending, material handling and inspection applications.

Visit the Brooks Automation booth for a product demonstration or to speak with members of the technical applications team.

The full line of PreciseFlex™ robot models include:

- [PreciseFlex™ DDR robots](#), in 4- and 6-axis models with a tall Z-axis and large cylindrical working volume in a compact footprint.
- [PreciseFlex™ 100](#) Cartesian, featuring a space-saving design that delivers speed and safety. The world's only collaborative cartesian robot.
- [PreciseFlex™ 400](#), ideal for benchtop applications where price, ease-of-use and space are critical.
- [PreciseFlex™ 3400](#), ideal for small parts handling and consumer electronics testing.

“Brooks’ PreciseFlex collaborative robots can improve quality and productivity while easing labor challenges, solving machine tending, assembly and packaging tasks,” commented Brian Powell, Director of Sales and Marketing for Brooks Automation. “And since they can work unguarded in a manufacturing setting, they’re easy to implement.”

If you haven’t made plans yet to attend Automatica, attendees can [get tickets here](#). For more information on Brooks Automation or PreciseFlex collaborative robots, visit <https://www.brooks.com>.
